Module Name
Redox Metabolism

Type of Module	**Module Code**
o Advanced Module	Redox Metabolism

Identification Number	**Workload**	**Credit Points**	**Term**	**Offered Every**	**Start**	**Duration**
MN-B-SM (G 3)	360 h	12 CP	2nd term of studying	Summer term, 2nd half	Summer term only	7 weeks

1	**Course Types**	**Contact Time**	**Private Study**
	a) Lectures	24 h	48 h
	b) Practical/Lab	154 h	102 h
	c) Seminar	8 h	24 h

2 Module Objectives and Skills to be Acquired

Students who successfully completed this module

- have acquired detailed knowledge on cellular redox processes (e.g. redox reactions, oxidative protein folding, redox metabolism, sources of reactive oxygen species, antioxidative defence systems).
- have acquired detailed knowledge on and can employ techniques to investigate cellular redox processes (e.g. tools to assess small redox molecules in intact cells [genetically encoded fluorescent protein sensors], tools for characterizing redox pathways in vitro [protein purification and enzymatic characterization], tools to assess the redox state of proteins [thiol modification and subsequent analysis]).
- can independently design experiments for characterization of redox processes including planning of suitable controls, definition of expected outcomes and pitfalls.
- can independently carry out small scientific projects (i.e. a series of experiments) related to the topic of the module.
- have learned how to present research results in oral and written form and to critically discuss scientific publications related to the topic of the module.
- are able to transfer skills acquired in this module to other fields of biochemistry.

3 Module Content

- Theory: e.g. redox processes, evolution of redox signalling, origins of reactive oxygen species, cellular antioxidative systems, cellular machineries for oxidative protein folding, redox reactions in metabolism, the central role of NAD(P)H, redox modifications on biomolecules, consequences of cellular redox perturbations
- Practical methods: e.g. genetically encoded fluorescent proteins as tools to measure small redox molecules, experiments to determine protein redox states in intact cells and in vitro, in vitro characterization of redox proteins and pathways, experiments to assess mitochondrial reactive oxygen species production, assessment of cellular behaviour upon redox stress (proliferation, cell death), redox stress response pathway analysis in cells and in silico

4 Teaching Methods

- Lectures; Practical/Lab (Project work); Seminar; Guidance to independent research; Training on presentation techniques in oral and written form

5	**Prerequisites (for the Module)** Enrollment in the Master's of Science degree course "Genetics and Biology of Aging and Regeneration" or in the Master's degree course "Biochemistry and Molecular Medicine" **Additional academic requirements** Previous attendance of the lecture module Principles of Molecular Genetics, Development and Aging
6	**Type of Examination** The final examination consists of two parts: One hour written examination on topics of lectures and seminars (50 % of the total module mark), oral presentation (20-30 min; 50 % of the total module mark)
7	**Credits Awarded** Regular and active participation; Each examination part at least "sufficient" (see appendix of the examination regulations for details)
8	**Compatibility with other Curricula*** Optional compulsory module in the Master's degree course "Biochemistry and Molecular Medicine"
9	**Proportion of Final Grade** 12.0 %
10	**Module Coordinator** Prof. Dr. Jan Riemer, phone 470 7306, e-mail: jan.riemer@uni-koeln.de
11	**Further Information** **Participating faculty:** Prof. Dr. J. Riemer, Dr. Matthias Weith **Literature:** • Information on recommended textbooks and other reading material will be given on the ILIAS representation of the course (see https://www.ilias.uni-koeln.de/ilias/goto_uk_cat_2815610.html) **General time schedule:** Week 1 (Mon.-Fri.): Lectures, preparations for practical work and practical work; Week 2-5 (Mon.-Fri.): Lectures, seminars and practical/lab; Week 6 (Mon.-Fri.): Writing report; Week 7 (Mon.-Fri.): Finalization of the written report and preparation for the oral examination **Introduction to the module:** May, 27, 2024 at 08:00 a.m. (this date is also the start of the module = week 1), Center for Molecular Biosciences (COMB), room 0.01 (ground floor) or online (in this case, further information/link will be sent to your Smail-Account); for preparation to the module before this introduction see ILIAS link under literature. **Written examination:** July 19, 2023, second/supplementary examination August 30, 2024; the latter date may vary if students and module coordinator agree. More details will be given at the beginning of the module.
